Classifying Worker Exposure to SARS-CoV-2

Very High Exposure Risk

*Very high exposure risk* jobs are those with high potential for *exposure to known or suspected sources of COVID-19* during specific medical, postmortem, or laboratory procedures:

- Healthcare workers working with known or suspected COVID-19 patients.
- Laboratory personnel collecting or handling specimens from known or suspected COVID-19 patients.
- Morgue workers performing autopsies of people who are known to have, or suspected of having, COVID-19 at the time of their death.

High Exposure Risk

*High exposure risk* jobs are those with high potential for *exposure to known or suspected sources of COVID-19*:

- Healthcare delivery and support staff
- Medical transport workers
- Mortuary workers

Medium Exposure Risk

*Medium exposure risk* jobs include those that require frequent and/or close contact with (i.e., within 6 feet of) people who may be infected with SARS-CoV-2, but who are not known or suspected COVID-19 patients. In areas where there is ongoing community transmission, workers in this category may have contact be with the general public (e.g., in schools, high-population-density work environments, and some high-volume retail settings).

Low Exposure Risk

*Lower exposure risk* (caution) jobs are those that do not require contact with people known to be, or suspected of being, infected with SARS-CoV-2 nor frequent close contact with (i.e., within 6 feet of) the general public.
